

Patsystems XConnect

Patsystems' fully managed ASP solution

What is Patsystems XConnect?

Patsystems XConnect (pronounced "cross connect") is Patsystems' fully-managed Application Service Provider (ASP) solution for FCMs, banks, trading houses and other institutions that prefer an outsourced trading solution. Patsystems XConnect offers the full benefits of Patsystems' trading solution without the requirement for clients to invest in hardware, data centres or technical support resources.

Patsystems XConnect is available through a network of hubs located in Chicago, Hong Kong, London, Singapore, Sydney and Tokyo. All Patsystems XConnect hubs are connected using Patsystems XLink capability via a global wide area network (WAN). XLink provides seamless exchange connectivity and order routing between any Patsystems XConnect hub or client site, therefore allowing clients to access exchanges without direct membership.

Clients can opt to use just one of Patsystems XConnect hubs, or they can utilise multiple hubs to facilitate cross-market access. For example, a client in Tokyo can utilise the Tokyo hub for localised access to the OSE, TFX, TSE and TOCOM and leverage the Chicago hub to access CME Group and IntercontinentalExchange (ICE) markets.

Key benefits of Patsystems XConnect include:

- Scalable architecture supports any number of users from one user to thousands of users
- High-speed order routing and robust throughput
- Fully resilient and redundant architecture
- 24x7 real-time network monitoring system
- Outstanding customer support
- Easy to deploy
- Competitive pricing
- Low latency connectivity to more than 20 futures exchanges worldwide

Industry-Leading Trading Tools

With Patsystems XConnect, customers can utilise any one of Patsystems' industry-leading front-end trading applications: J-Trader or Pro-Mark. J-Trader is Patsystems' widely distributed all-purpose trading tool while Pro-Mark is Patsystems' advanced front-end for professional traders. Both front-ends include comprehensive pre-trade risk management.

Alternatively, customers can opt to utilise their own algorithms or proprietary front-end applications through Patsystems API or FIX Trading Gateway. Both API gateways provide a high speed exchange connectivity solution for order flow and market data.

About Patsystems

Total FlexAbility

We deliver tailored solutions, built from modular components, to enhance derivatives trading performance and trade processing. Our solutions can range from a plug-and-play module to address a specific issue, to complete high-performance trading systems with global access to an extensive list of key exchanges.

We work in partnership with our customers to deliver robust systems that align with their business strategies – and have done so since our foundation in 1994.

Numerous leading banks, trading houses, hedge funds and professional traders around the world rely on Patsystems' technology for electronic trading in derivatives, FX, energy and other asset classes.

Key Business Areas

Trading Solutions

- Powerful front-ends, API and exchange connectivity to enable trading across all major futures exchanges and liquidity pools.

Risk Solutions

- A standalone, platform independent risk management system that calculates risk across multiple asset classes in real-time.

Exchange Solutions

- End-to-end exchange and back office solutions that automate all steps in the trade cycle from front to back office.
