## Need cross-platform exchange access? The answer is XLink.

XLink (pronounced cross link) is a powerful software solution that promotes exchange connectivity in the worldwide Patsystems community.

## Patsystems' technology bridge

XLink is an innovative software product that increases the power of the Patsystems trading community. XLink bridges multiple separate Patsystems trading domains and systems — wherever they are installed. It could be a Chicago system and a London system at the same company, or a New York system and a Tokyo system at completely different organisations. Whatever the relationship, XLink allows local Patsystems Pro-Mark and J-Trader users to access remote exchanges that would otherwise be inaccessible — and without the need for expensive additional memberships and extra exchange gateways.

## Harness the power of XLink — worldwide access, at a local price

The XLink software runs on a local server and routes orders seamlessly from the originating company to the receiving company. XLink runs across a LAN, WAN, leased line or the Internet, and it offers all the advantages of pre-trade risk management, speed of access and straight-through processing that you expect from Patsystems.

## Need more information?
